

# How to make a Simple Circuit

A simple circuit can be made finding items around the house to 'light up' your day and get your wires (points to head) moving!

You'll need: a light bulb (from a flashlight will work), tin foil, tape, and a D battery.

STEPS:

**Step 1:** Cut two pieces of aluminum foil and fold them into strips. These will be your wires for the circuit.

**Step 2:** Tape one to the positive end of the battery and the other to the negative end.

**Step 3:** Touch one strip to the metal part of the bulb, just under the glass.

**Step 4:** Touch the other strip to the silver tip on the end of the bulb.

The bulb should light up because you have created an unbroken circuit with your "wires."

When you have a good idea, let your light shine, no matter where you get your start.

Here's to keeping that lightbulb above your head on!
